

Stuart Dean, a trusted partner since 1932, has earned our reputation of doing well by doing good. In response to the COVID-19 crisis, we have introduced services to make your workplace safe for your tenants, visitors, customers and employees. Stuart Dean now offers certificates for Disinfection Services and Anti-Microbial clear coat for touch point services that you can proudly display to make it clear that you are providing for their health and safety.

Total⊕Point Atomized Antiviral Service: Using machines that atomize disinfectants into a fine mist, this process produces an even coating of an EPA registered, hospital-grade disinfectant that is proven to meet the EPA's criteria for use against SARS-CoV-2, the virus that causes COVID-19. This service will complement the on-going efforts of your janitorial staff to combat the COVID-19 illness, extending coverage to wider areas, floors, walls, furniture and spaces that janitorial staff may find inaccessible.

Touch⊕Point Clear Coat Service: This service protects high volume architectural metal touch-points with a clear coat finish containing an anti-microbial additive of silver nanoparticles to assist in germ mitigation. The natural biocidal quality of the silver persists as long as the clear coat is intact.

Touch⊕Point Disinfectant Service: This service disinfects architectural touch-points we normally provide metal restoration and refinishing services to. We use a 75% Isopropyl alcohol solution, recognized by the CDC as an effective means to disinfect surfaces, to disinfect high volume touchpoints.
